

API for Product Modeling

Academy-PROMO-API-101

The API for Product Modeling allows model data to be added to a ticket in Tacton Administration from outside CPQ.

In this course, participants will learn about the data structure of the API for Product Modeling, how to set up access in Tacton Administration, and how to use Postman to read and create model data.

This introduction to the API for Product Modeling is particularly useful for those creating model data from an external source, or planning to set up an integration to Product Modeling.

TYPICAL STUDENT

Application Administrator, Solution Architect, Integration designer/developer or API engineer/consultant that will be working with the API for Product Modeling or need to have an understanding of the Tacton CPQ Product Modeling API.

PREREQUISITES
